DETAILED ACTION

Allowable Subject Matter

1. Claims 2, 4-7, 25-26 & 28-34 are allowed. The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or suggest, in combination with the other claimed features, an anti-oxidizing layer containing a same element as an element in the interconnect layer that is chemically bonded or alloyed with a different element which is different from the element contained in the interconnect layer. The anti-oxidizing layer being disposed between the interconnect layer and the protective film, wherein the electrode pad is in electrical contact with the interconnect layer and is disposed on the protective film in a position to permit contact by a probe and wherein the different element of the anti-oxidizing layer is a metal having a lower oxidation-reduction potential than the other element, which is a metal, contained in the interconnect layer. The anti-oxidizing layer being disposed between the interconnect layer and the protective film to inhibit corrosion of the interconnect layer when a probe is introduced. Also, the different metal in the anti-oxidizing layer is a group IV element or group VI element in long form periodic table.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
